THE CONSORTIUM

Launched in 2018, Offline Internet Consortium is a growing platform that supports small nonprofit organizations addressing offline internet issues.

The organization is headquartered at Arizona State University with 20 partners across 90 countries. It includes a board of directors that collaborates directly with partners to connect individuals in offline environments with resources that advance education and strengthen communities.

OUR MISSION

Our Mission is Simple but Clear:
To Bridge the Digital Divide and
Ensure that Opportunity and Education
are Within Reach for Everyone, Everywhere.

OLI works globally with partners across five continents working with dozens of countries, for example Afghanistan, Canada, Colombia, Ethiopia, Rwanda, South Africa, Tajikistan, Thailand, Ukraine, and more as seen on the map.

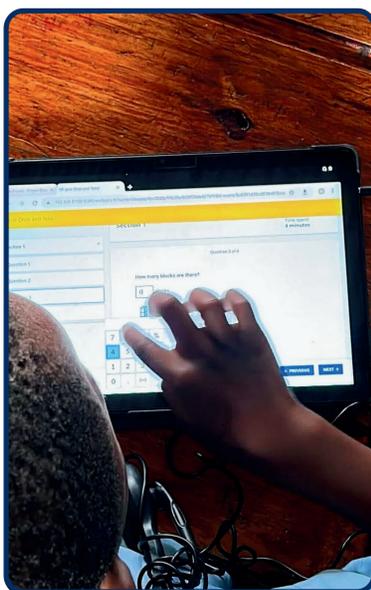

At the Offline Internet Consortium, “offline” means more than no connection—it includes places with no access, unreliable service, or internet that’s too expensive to afford. We deliver digital libraries and critical resources to bridge these gaps and connect the unconnected.

Offline access creates impact where it’s needed most—communities recovering from disaster, remote and Indigenous populations, refugee camps, incarcerated individuals, and schools without reliable connectivity. These solutions bring learning, opportunity, and critical information to those often left behind.

OLI partners are bridging the digital divide with innovative, tech-powered solutions. From solar-powered digital libraries and portable servers to flash pens, satellite TV downloads, and even “sneakernet” delivery, we store curated content locally—no constant internet required.
